

Xtraordinary En-Z-Yms®

Digestive Enzymes with Prebiotics & Probiotics for Dogs & Cats

Every bite of food contains nutrients—but those nutrients can only benefit your pet if they're properly digested and absorbed.

Digestive enzymes help break food down into usable nutrients, while prebiotics and probiotics help maintain a healthy digestive system for better nutrient absorption and overall wellness.

Enzymes unlock nutrition.

Without digestive enzymes, many nutrients simply pass through the digestive tract unused.

ACCORDING TO ROSEMARY...

"Good digestion is where good health begins. If the body can't absorb nutrients, it can't make the best use of them."
